APRIL 2024

## TERMS OF REFERENCE CORE SWITCHES AND FIREWALL FOR COLOCATION SITE PR 100-23-06-1345

The **City Government of Pasig**, through the efforts of the *Management Information Systems Office (MISO)* intends to procure other critical equipment intended to reinforce the capabilities of the colocation currently situated in Clark, Pampanga.

### I. BACKGROUND

In 2021, the City Government of Pasig started its Colocation Project to prepare the data center ready for any disaster that might happen and the impact of the planned retrofitting works for the City Hall. All essential processes and operations when it comes to information and communication technology needs of the City Hall is dependent on the data center, and needs a remote redundancy that can be accessed via a dedicated internet connection to make these operations continuous even there are untoward incidents happened on the data center situated on the 3<sup>rd</sup> floor of the City Hall. Currently, operations that are strategically needed to be collocated are benefitting from this project. This successful implementation of the project made the Management Information Systems Office decide to make the current colocation increase its capacity and security to collocate all systems running in our Main Data Center.

To muscle up the colocation operations, MISO has to procure more core switches and critical firewall appliance which is critical to an independent functional colocation facility.

Through this, our colocation site can support more functional information systems and could fully replicate our main data center operations in a 100% scale.

Another essential objective of this project is to provide secured connectivity to remote sites where the City Government will locate its transactional operations and planned relocation site.

It would work on two critical purposes: avoid unauthorized connection such as illegal intrusions and seamless connectivity between data center, colocation and relocation sites.

## II. TECHNICAL SPECIFICATIONS AND BILL OF MATERIALS

The following Bill of Materials are needed to be purchased in ONE (1) LOT ONLY due to dependencies of each component to the targeted functionalities for the colocation.
